Computer Physics Communications 92 (1995) 425

Computer Physics Communications

Program index to volume 92

Atomic physics

ADCB, CESD (Fortran, 1754 lines). A program for the complete expansion of *jj*-coupled symmetry functions into Slater determinants, Fritzsche, S. and I.P. Grant 92 (1995) 111

ADCP, RMATRX1 (Fortran, 49896 lines). RMATRX1: Belfast atomic *R*-matrix codes, Berrington, K.A., W.B. Eissner and P.H. Norrington 92 (1995) 290

Computational methods

ADCO, LEWIS (Fortran, 1274 lines). Evaluation of a general three-denominator Lewis integral, Roy, U., L.J. Dubé, P. Mandal and N.C. Sil, 92 (1995) 277

ADCK, RFSFNS (Fortran, 1671 lines). RFSFNS: A portable package for the numerical determination of the number and the calculation of roots of Bessel functions, Vrahatis, M.N., O. Ragos, T. Skiniotis, F.A. Zafiropoulos and T.N. Grapsa 92 (1995) 252

Computer algebra

ADBX, Dill (Mathematica, C, 3377 lines). Dill: an algorithm and a symbolic software package for doing classical supersymmetry calculations, Lučić, V. 92 (1995) 90

Elementary particle physics

ADCF, PROJET VERSION 4.1 (Fortran, 104777 lines). PROJET: Jet cross sections in deeply inelastic electron proton scattering. Version 4.1, Graudenz, D. 92 (1995) 65

ADBX, Dill (Mathematica, C, 3377 lines). Dill: an algorithm and a symbolic software package for doing classical supersymmetry calculations, Lučić, V. 92 (1995) 90

Nuclear physics

ADCL, CASSINI (Fortran, 6335 lines). Single-particle calculations in an axially deformed Woods–Saxon potential with Cassinian ovals parametrization of the shape deformation, Garrote, E., R. Capote and R. Pedrosa 92 (1995) 267
